Designing reliable systems for real-world data

A modern, readable Beamer template for DASE

Your Name

October 2026

A template that carries a point of view

Use structure and colour to make the argument easier to follow

Start with the question

Give each slide one job. A short title should tell the audience what to look for.

Show the evidence

Use a diagram, a number, or a compact comparison before adding more prose.

Make the decision visible

Use the orange accent sparingly for the result, risk, or next step that deserves attention.

One visual language. Many research stories.

1 The visual language

DASE / HKU SCHOOL OF ENGINEERING

A small palette, a clear hierarchy

The crest supplies the energy; DASE purple keeps the system coherent

DASE
purple

HKU red

DASE
green

DASE
blue

DASE
yellow

- ▶ Dark text on a warm white canvas keeps body copy comfortable.
- ▶ Purple marks structure: titles, section pages, and primary actions.
- ▶ Orange and yellow are reserved for emphasis, so they retain their signal.

Type scale

Slide title

A useful subtitle

Body copy should stay around 18–22pt on screen. Keep lines short and let the margins breathe.

Research question → evidence → decision

Design principle

A slide is easier to trust when the claim, the measurement, and the consequence appear together.

Readable by default

A few layout rules prevent most crowded slides

- 1 Put the conclusion in the title.
- 2 Keep each column to one thought.
- 3 Use a callout for the one number people should remember.

one idea per visual block
space is part of the design

A compact result slide

Use a single visual and a sentence that interprets it

The takeaway

The target case improves after the method sees the stress pattern, while the baseline stays flat.

Add the unit, sample size, and uncertainty in the caption or notes.

Tables and callouts

Condition	Accuracy	Cost	Change
Baseline	0.71	1.00	—
With timing	0.79	1.12	+8 pts
With control	0.84	1.18	+13 pts

Remember

Highlight the decision variable, then leave supporting detail in the notes.

A small table is often more useful than a dense chart when the comparison has only a few rows.

Make the evidence easy to read

Sources support the claim without interrupting the story

- ▶ Compare values on a common scale [1].
- ▶ Choose visual encodings that match the data and the task [2].
- ▶ Offer an overview, then zoom and filter for details [3].

The takeaway

A research slide should make both the evidence and its source easy to find.

2 Start from this file

DASE / HKU SCHOOL OF ENGINEERING

Use the template in three moves

DEPARTMENT OF
DATA AND SYSTEMS ENGINEERING
The University of Hong Kong

1. Copy the folder

Keep the '.sty' file beside your
'tex' file.

02

2. Set the metadata

Replace the title, author,
institute, and date in
`template.tex`.

03

3. Add your story

Reuse the blocks, cards, and
section pages as building pieces.

The theme is intentionally local: edit the style file when your group needs a different rhythm.
